

Dear Legislators,

PLEASE PRESERVE THE INTEGRITY OF THE CLASS I RENEWABLE PORTFOLIO STANDARD.

Trash incineration is NOT clean energy.

Canadian Hydro is not a good idea for this area, as we need local power and local jobs. Moreover, New England has many, many streams and rivers with formerly operating little power stations. Maybe bring 'em back??

Energy efficiency and MICRO-GRIDS are preferable to any fossil fuel, including natural gas, and certainly preferable to the nearby nuclear power plant (which is a giant water heater).

No more giant grids, please. I type this during howling winds and broken trees still awaiting removal from the last wind/show event. Enough.

I also live within walking distance of monstrous, now enlarged, transmission lines from Dominion's Millstone plant, which continues to heat Long Island Sound water, and wants permits to "cool" with warmer water. Sorry, we do not need either.

Thanks,

Geraldine D. Kuenkler
